

Light & Power Switch Controller

TS-9103

Feature:

- * Four channels incandescent dimmer unit for adjusting the brightness of the incandescent lamp.
- * Four channels power management unit for controlling peripheral power switch.
- * The standard RS-232 control interface works with programmable central controller and supports the third-party control equipment.
- * In the need of power management and light adjustment, the function of TS-9103 is especially prominent.

Specifications:

Model	TS-9103
Dimming Unit With Load	Rated current for single channel: 20A, the maximum current: 30A
Power Control Unit With Load	Current for single channel: 20A
Controlling Method	Through RS-232 protocol
Power	24V Power Supply
Size	484×209×66mm
Weight	3Kg
Maximum Power Consumption	10W
